

Sports Assisted Move

Witnessed event Untrained bystanders present Casualty with injury found during SALTAPS survey
 Casualty determines whether or not injury is too painful for movement from arena

Overall Procedure		Action Sequence	✓
D	Injury Assessment	SALTAPS	Stop assessment upon pain response Request assistance from bystander Confirm no back pain
E	Evacuate	Assisted stand	Lead first aider and bystander (rescuers) to stand on each side of casualty Rescuers to interlock fingers and provide 'hand support basket' Casualty to place each hand into each supporting interlocked hand basket Instruct casualty to bring good leg close – heel to buttock After command casualty to stand by pushing down on good leg Instruct to keep weight off injured limb Rescuers to help casualty balance whilst achieving standing position
		Assisted Move	Rescuers face into casualty At the command rescuers take one sidestep Casualty pushes down and swings good leg forward Repeat process until reach end of active area
	Ensure	SALTAPS	Repeat SALTAPS Move onto Progressive Function Test or administer first aid
